

What the Moonshot Research and Development Program Should Be (Summary of Issues Discussed at the 1st Visionary Council and EC Report)

<Regarding Setting Targets>

- ✓ Setting targets is the most important (Document 3-2)
- ✓ Contribute to solution to the worldwide challenges as well as strong growth in Japan
- ✓ Set enthralling targets which can get many people including private companies and the young ambitious to participate in projects
- ✓ Provide the scientific theory which supports the feasibility of targets

<Regarding the Operation of the Program>

- ✓ Proper management (governance structure → please refer to the appendix: mission-oriented structure in EC report)
- ✓ Aim to reform the social system by cooperating with researchers in the humanities
- ✓ Program design can lead to getting the specific results one after another, though it will take time to achieve the final targets
- ✓ Build the platform where various types of technology are utilized

(Accomplishment of projects which require the comprehensive design which can't be realized by only single technology)
- ✓ Flexibility which enables the agile adjustment to proceed projects
- ✓ Build the ecosystem where overseas researchers and entrepreneurs can join
