

# Kitano's forecast

**Many moonshot projects will hit the wall at the 50-80% achievement.  
It is often happen that the breakthrough to reach the goal will come  
from unexpected researches unrelated to its project.**

**The difference from Apollo project :**

- (1) Longer-term plan  
(High ratio of science and technology)**
- (2) Target needs social change**

- (1) Result of Humanities, Social Sciences, behavioral psychology**
- (2) Progress of basic science as material, chemistry, biology**
- (3) Big contribution of art and design**

**Our Moonshot(MS) program should set more research budget for a basic research and improve a research environment for success of moonshot project.**

**Our MS program should allow to realize funding (public fund, donation, academic-industrial collaboration etc.) .**
